The application has been amended as follows:

In the claims:

The claims have been amended as follows:

1. (~~Original~~ Previously Amended) A device comprising:
a communication arrangement;
a housing enclosing the communication arrangement, the housing having an opening formed therein;
a cover mounted over the opening in the housing, the cover including a peripheral housing contacting portion which extends around the opening;
and
an antenna mounted within the housing contacting portion of the cover and spaced from the housing so that the antenna and the opening cooperate to handle signals for the communication arrangement.
2. (Original) The device according to claim 1, further comprising:
a processing arrangement situated within the housing and coupled to the communication arrangement, the processing arrangement processing the signals.
3. (Original) The device according to claim 1, wherein the device is a bar code scanner and further comprising:

a sensing element detecting bar codes through the opening in the housing and converting the bar codes into signals, wherein the sensing element provides the signals to the communication arrangement which transmits the signals to a communication base station.

4. (Original) The device according to claim 1, wherein the communication arrangement communicates with a communication base station which is capable of at least one receiving and sending signals from and/or to the device.
5. (Original) The device according to claim 4, wherein the communication arrangement and the communication base station utilize a wireless communication protocol to transmit the signals.
6. (Original) The device according to claim 1, further comprising: a wire coupling the antenna to the communication arrangement, the wire extending out of the cover into the housing.
7. (Original) The device according to claim 1, wherein the opening of the housing is a half of a wavelength of the signals at a frequency of operation, and wherein an edge of the opening operates with the antenna as a loop antenna at a desired frequency.
8. (Original) The device according to claim 1, wherein the opening of the housing is substantially free of an electrically conductive material.
9. (~~Original~~ Previously Amended) The device according to claim 1, wherein the housing is composed of an electrically conductive material.
10. (Original) The device according to claim 1, wherein the cover is composed of a substantially non-electrically conductive material.
11. (Original) The device according to claim 1, wherein the cover is composed of at least one of a plastic material and a glass material.
12. (Original) The device according to claim 11, wherein the antenna is situated between an abutting surface of the cover and an edge of the housing.
13. (Original) The device according to claim 1, wherein the antenna is free from physical contact with the housing.

Art Unit: 2876

14. (Original) The device according to claim 1, wherein the antenna remains in a static position with respect to the opening when the cover is mounted on the housing.
15. (~~Original~~ Previously Amended) The device according to claim 1, wherein the cover includes a mounting location, the antenna being situated in the mounting location during a manufacturing process.
16. (~~Original~~ Previously Amended) The device according to claim 1, wherein the cover includes an inner cover and an outer cover, the antenna being inserted between the inner and outer covers.
17. (Original) The device according to claim 1, wherein the cover and the housing are unitary.
18. (Cancelled).
19. (Original) A mobile scanner comprising:
a communication arrangement communicating with a communication base station using a wireless communication protocol;
a housing enclosing the communication arrangement, the housing having an opening formed therein;
a cover mounted over the opening in the housing and being composed of a substantially non-electrically conductive material, the cover including a peripheral housing contacting portion which extends around the opening;
an antenna (i) mounted within the housing contacting portion of the cover, (ii) spaced from the housing and (iii) free from physical contact with the housing so that the antenna and the opening cooperate to handle signals for the communication arrangement; and a processing arrangement situated within the housing and coupled to the communication arrangement, the processing arrangement processing the signals.
20. (New) The device according to claim 1, wherein the cover extends around the entire perimeter of the opening.

Allowable Subject Matter

3. Claims 1-17 and 19-20 are allowed.
4. The following is an examiner's statement of reasons for allowance:

The best prior art of record (Klaus) fails to teach the specific arrangement of the components of the invention as set forth in claims 1-17 and 19-20 and the examiner can find no teaching of the specific device, nor reasons within the cited prior art or on her own to combine the elements of these references other than the applicant's own reasoning to fully encompass the current pending claims. In addition, see applicant's reasoning in amendment/response filed 3 November 2003.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
